SUMMARY

A Computer Science undergraduate with hands-on experience in Android development, cross-platform mobile application development, and AI-assisted software workflows. Experienced in developing production-quality applications via competitive programming and independent projects with a strong foundation in Data Structures, Algorithms, and Object-Oriented Programming. Actively pursuing software engineering or internship roles to leverage problem-solving skills and contribute to impactful projects.

EDUCATION

Bachelor of Technology in Computer Science and Engineering
Institute of Aeronautical Engineering, Hyderabad — Expected May 2028
CGPA: 8.58 / 10

TECHNICAL SKILLS

Programming Languages:	Java, Python, Kotlin, Dart
Web Technologies:	JavaScript, React, TypeScript
Mobile Development:	Android SDK, Flutter, Jetpack Compose
Tools & Platforms:	Git, GitHub, Android Studio, VS Code, Firebase, Google AI Studio
Core Concepts:	Data Structures and Algorithms, Object-Oriented Programming, Software Design

PROJECTS

Vikify – Android Music Player *GitHub*
Technologies: Kotlin, Android SDK, ExoPlayer, Material Design 3

- Developed a native Android music player with background playback and media notification controls
- Designed a service-based architecture to ensure seamless audio playback across screen navigation

AirMap.viki – Air Quality Monitoring Application *GitHub*
Technologies: Python, ROS, Simulation, Data Processing

- Developed an application to monitor and display Air Quality Index (AQI) levels for indoor and outdoor environments
- Processed environmental data to provide real-time AQI insights and categorized air quality conditions
- Designed a modular system for data handling and visualization within a simulated environment

Secure-AI-Pipeline – Security Pipeline UI Prototype *GitHub*
Technologies: TypeScript, React, Vite

- Built a TypeScript + React interface to visualize a secure AI pipeline workflow
- Engineered modular UI components representing pipeline stages and security checks

ACHIEVEMENTS

- Secured **3rd Prize** in a National-Level Hackathon (Certificate)
- Solved **100+ Data Structures and Algorithms problems** across LeetCode and GeeksforGeeks, covering arrays, trees, graphs, dynamic programming, and greedy techniques
- Built and maintained **6+ public projects** on GitHub demonstrating practical software engineering and system design skills

CODING PROFILES

LeetCode:	Vhttps://leetcode.com/u/Vishnu_Kanchipati
GeeksforGeeks:	geeksforgeeks.org/user/vishnukan5jhk
HackerRank:	hackerrank.com/profile/vishnukanchipati
GitHub:	github.com/TheCraftsman1
